

Assignment 3 – Project Documentation

Project Title:

Sales Performance Dashboard using Power BI

Prepared by:

Ahmed Fathy

Date:

1. Project Overview

The client owns a retail business and wanted to analyze sales performance across different branches, products, and time periods. The goal of this project was to transform raw sales data into an interactive Power BI dashboard that helps management monitor performance, identify trends, and make data-driven decisions.

2. Project Objectives

- Analyze overall sales performance.
- Monitor revenue and profit.
- Identify top-performing products.
- Compare branch performance.
- Track monthly sales trends.
- Support business decision-making through interactive dashboards.

3. Project Scope

Included:

- Data Cleaning
- Data Transformation
- Data Modeling
- Dashboard Development
- KPI Creation
- Report Documentation

Excluded:

- Data Collection
- Database Administration
- ERP System Integration
- System Maintenance

4. Client Requirements

- Develop an interactive Power BI dashboard.
- Display monthly and yearly sales performance.
- Analyze product and branch performance.
- Create dynamic filters and slicers.
- Build clear KPIs and charts.
- Deliver an easy-to-use dashboard.

5. Tools and Technologies

- Microsoft Excel
- SQL
- Python
- Power BI

6. Project Timeline

Requirement Gathering 1 Day

Data Cleaning 2 Days

Data Analysis 2 Days

Dashboard Design 3 Days

Testing & Validation 1 Day

Final Delivery 1 Day

Total Duration 10 Days

7. Deliverables

- Cleaned Dataset
- SQL Queries
- Data Model
- Interactive Power BI Dashboard
- Project Documentation
- Final Business Report

8. Challenges Faced

- Missing values in the dataset.
- Duplicate records.

- Inconsistent product names.
- Different date formats.
- Data quality issues.

9. Solutions Implemented

- Removed duplicate records.
- Filled missing values where appropriate.
- Standardized product names.
- Converted all dates into one format.
- Validated the final dataset before analysis.

10. Project Outcome

The project successfully delivered an interactive dashboard that provides a clear view of sales performance. The client can now monitor revenue, compare branch performance, identify top-selling products, and track sales trends efficiently. The dashboard reduced reporting time and improved decision-making by presenting business insights in a simple and visual format.

11. Client Feedback

Project Status:

Completed Successfully ✓

Client Feedback:

"The dashboard is professional, easy to use, and provides valuable business insights. It met all the project requirements and was delivered on time."

12. Lessons Learned

- Data quality has a direct impact on analysis accuracy.
- Understanding business requirements is essential before starting analysis.
- Documentation makes future project updates easier.
- Effective communication improves project success.
- Interactive dashboards help businesses make faster and better decisions.

Project Summary

This project focused on transforming raw sales data into meaningful business insights using Power BI. Through data cleaning, modeling, visualization, and KPI development, the final dashboard enabled the client to monitor business

performance and make informed decisions based on accurate and interactive reports.
